

LETTER OF APPRECIATION

TO WHOMSOEVER IT MAY CONCERN

ARCORA, developed by TRUFFAIRE PRIVATE LIMITED, was presented as a technology-driven agricultural support platform designed to assist Farmer Producer Organizations (FPOs) and farmers through rapid crop disease identification, operational crop guidance, and structured cultivation-support workflows.

The platform demonstrates practical application of digital systems in supporting timely agricultural decision-making, crop-health management, and farmer-accessible operational guidance at the field level.

Considering the importance of timely and accurate agricultural assistance in reducing crop losses and supporting farmer livelihoods, technology platforms such as ARCORA may be beneficial for adoption and utilization within FPO ecosystems to strengthen farmer support services and improve operational agricultural awareness.

The efforts undertaken by TRUFFAIRE toward building accessible and operational agricultural technology solutions for farmers and FPOs are appreciated.
